

# Reinstalling Wave Editor

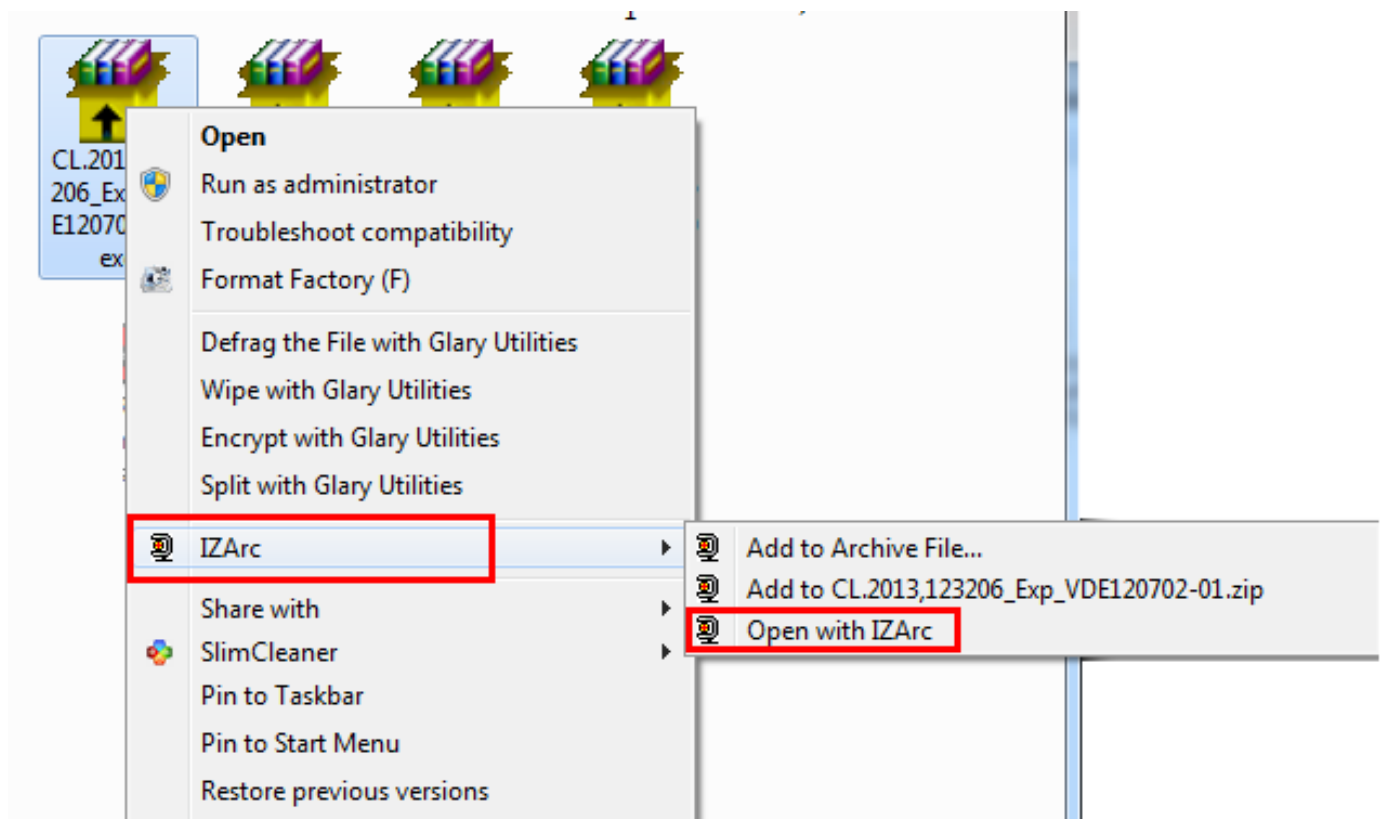

(without reinstalling the complete PD package)

1. Locate the PowerDirector installer files on your PC

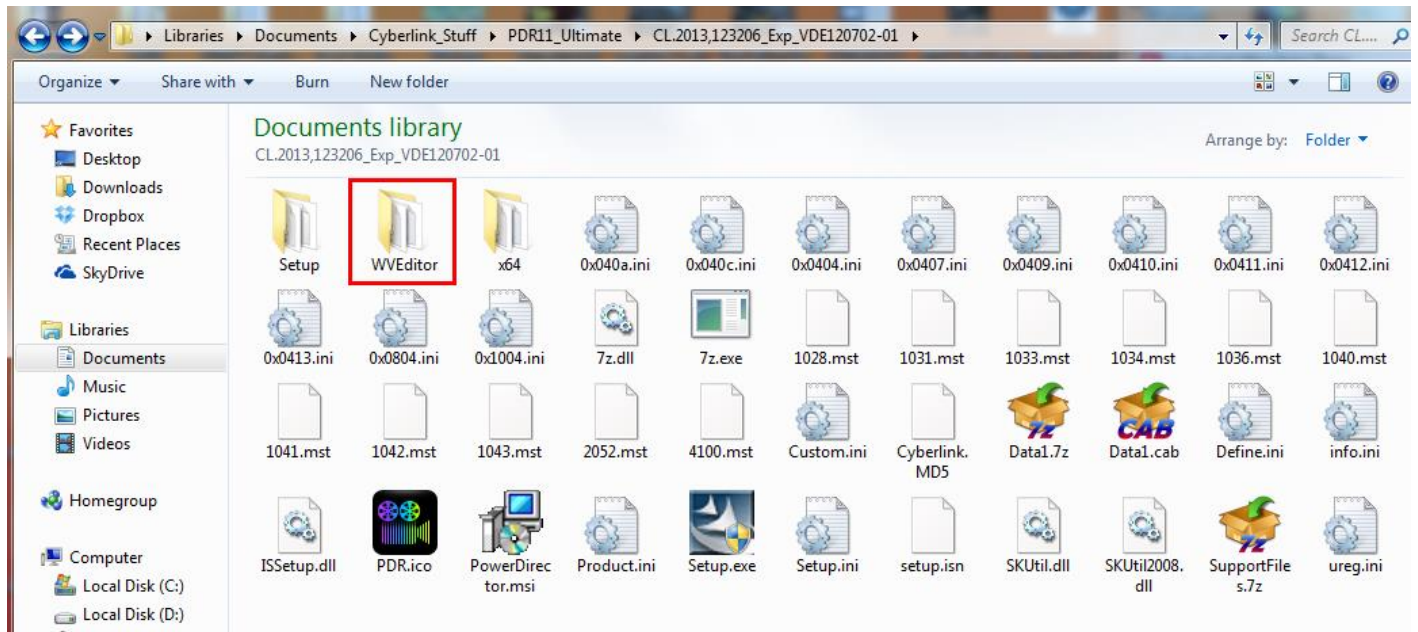

2. Unzip/Extract the files from the installer to isolate the [WaveEditor](#) installer files

- in the image IZArc is used, but other software, like WinRar, works in a similar way.

### 3. In the new folder created, locate the **WVEditor** folder

### 4. Open the **WVEditor** folder and double click **Setup.exe** to install WaveEditor
