

PowerDirector

Changing Timeline Highlight Colours

When video & audio clips - & transitions - are selected in PDR's timeline, it's not always easy to see.

By swapping some image files the highlight colours can be changed... if that's what you prefer

► The files to be swapped are found in:

C:\Program Files\CyberLink\PowerDirector14\skin\1024x768\WorkSpace or

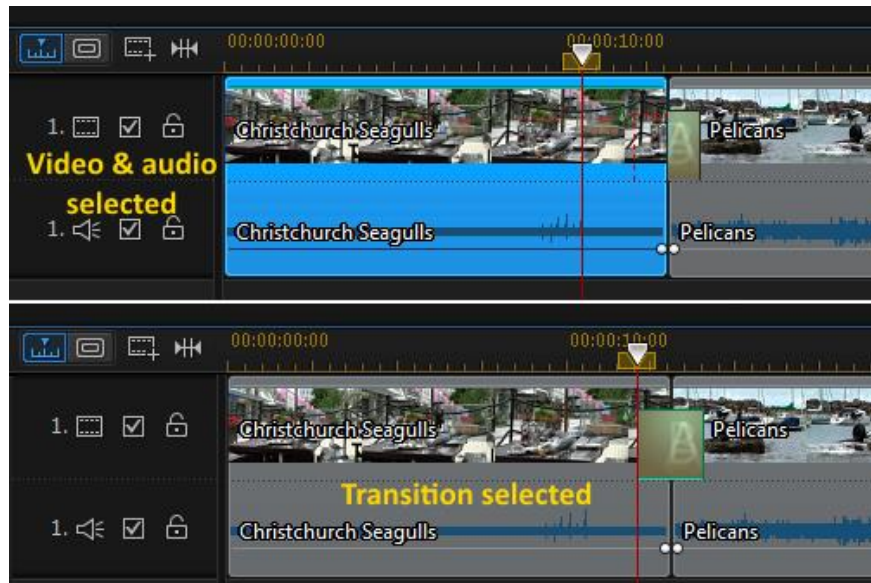

C:\Program Files\CyberLink\PowerDirector14\skin\192dpi\WorkSpace (for monitors > Full HD resolution)

- If your monitor is 1920x1080 or less, use the files in the **1024x768** folder
- If your monitor is better than Full HD, use the files in the **192dpi** folder

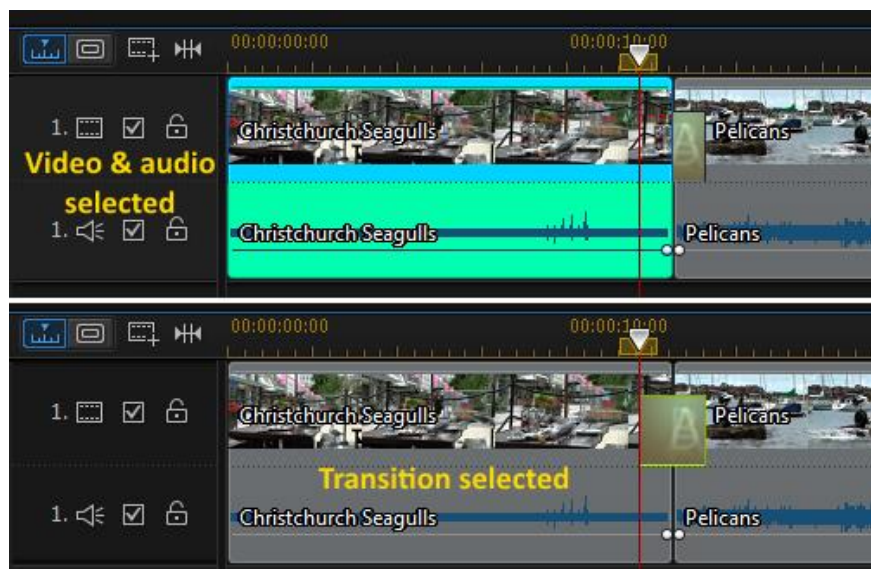

► It's best to make a **backup** copy of the original files included with PDR. Just in case, there's a backup copy included in the zip ☺

There are three sets of substitute files included in the zip. They look like this...
