# PhotoDirector – Creating a Silhouette

- Import photo into PhotoDirector
- Go to Guided > Extract/Compose > Background Removal
- Select area to be made into silhouette

- Check Remove unselected area > Apply

- In Fine Tune the Edge, clean up any unwanted remnants of the background
- Export new image in .png format, with transparent background

- If not already added to project, import .png file
- Go to Adjustment

- Make Tone adjustments as shown below (exposure & tone settings at minimum)

- Export silhouette
