Hi [billb](#) -

No - that's not right.

First thing to do is make sure you have installed ALL the PowerDirector Content Packs.

Open CAM (CyberLink Application Manager) & select Effect Packs. You'll see which packs have been installed. There's PowerDirector Content Pack Essential, and Volumes 1-5.

You can also check at **C:\Program Files (x86)\CyberLink\templates** where the template folders are stored.

Cheers - Tony
